About

Election Violence Tracker

Election violence tracker (EVT) is the Brainchild of **Policy Lab Africa** designed to enable citizens, government and non-governmental organizations to collect and monitor data related to violence and other security incidents that occur during an election period.

The data derived would help stakeholders inform policies and interventions aimed at preventing and mitigating violence, as well as holding perpetrators accountable.

The Open source web app features amazing features that allows for data collection, analysis and tracking.

Using the Independent Electoral Commission of Nigeria's (INEC) polling unit data and Open Street Map to geolocate each polling unit address as well as enable users' identification to verify these locations.

Users can report incidents as well as access data reports. These reports are summarized and visualized on a map using Leaflet and infographics. Which users can use to make informed decisions as well as drive change.

WHAT HAPPENS AFTER I MAKE A REPORT?

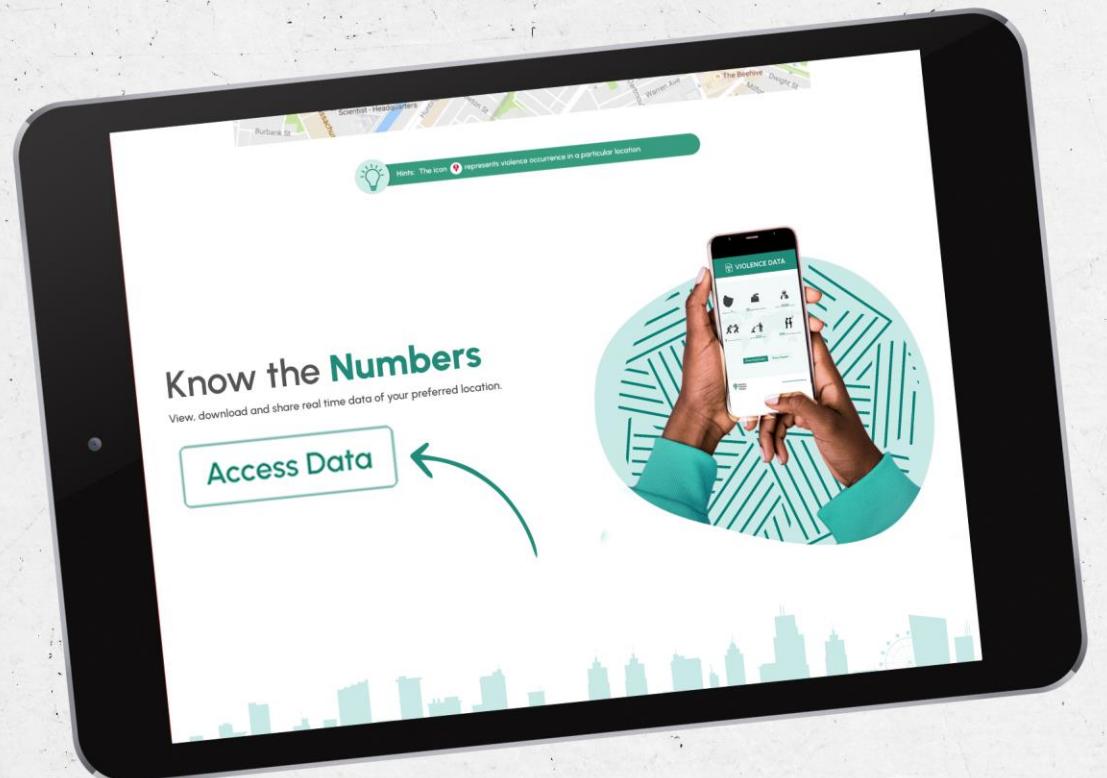

Your report is mapped to your location data which we have geolocated to the nearest accuracy. Subsequently, your report is automatically published on Twitter, enabling citizens to stay informed and provide comments. We encourage transparency and constructive conversations surrounding your report. We hope that serious incidents of violence are documented and used effectively to assist those in need, as well as elicit prompt responses from law enforcement.

HOW TO ACCESS DATA

Get the Data you need to make informed decisions and drive change.

Hint 4: Hold Shift + Double click on a particular region to zoom out while using a desktop device.

Hint 5: Click on the + and - sign to zoom in and out respectively.

NO INTERNET CONNECTION? NO WORRIES.

We have got you Covered

EVT is a progressive web application that incorporates a script, enabling you to continue utilizing it even when a shutdown occurs. In the event of an Internet outage, there's no need to worry because your data is automatically saved, and you can resume your work from the exact point where you left off once the connection is restored.
